PROJECT DETAILS

Project Title (Current Company): 2016 - 2019

- **Magicbook** (<https://gomagicbook.com>)
- **Photogurus**
- **Annotator Tool**

Magicbook is an AI-powered photo book design app for web and mobile. We ask some simple questions about design preferences to the customer. Customer uploads photos to the app and based on design preferences our AI engine can create the photo book within minutes. Customer can review the book and if satisfied then print a hardcopy by paying a small fee.

This app is currently launched in US, Canada and planned to be launched in Europe shortly.

The PhotoGurus app and web service allow you to upload ALL your digital photos from an event. Our storytellers will choose the best pictures based on-who the key personalities in the story are, emotion in the photos, scenic beauty, context etc. We then handcraft each page of your photo story and create something enjoyable and organized for you to cherish forever.

Photogurus is available in USA & Canada. Currently we made similar product for our partners - CEWE Photoworld (<https://cewe-photoworld.com/>) and monAlbumPhoto (<https://www.monalbumphoto.fr/>) to expand our business in Europe.

Annotator tool is a web application for Shutterfly (<https://www.shutterfly.com/>) where user can request for changes in the designed story and place an order to print a book.

Roles & Responsibilities:

- Technical Lead with team size of 5 members.
- Responsible for interaction with client for requirement specification and product demonstration.
- Sole responsible for project estimation, project scheduling, resource allocation.
- Responsible for initial database and technical design mapping from requirement specification for actual development. Developed and delegated applications based on the design document.
- Responsible for setting up automated testing by using python unit test for all modules.
- All projects have been delivered following standard Agile methodology suitable for the organization and product objective. Taken responsibility to maximize the team effectiveness and deliver projects on time with desired quality.
- Sole responsible for putting standard development process guidelines, version control using Git and coding guidelines in place.
